

IVWV****

(NEN 3140 & NEN 3840)

Who is this course for?

For both new and certified Installation Responsible Persons and/or Work Responsible Persons working with high- and low-voltage installations and networks.

What will you learn during the course?

How to take responsibility for reliable operations and/or ensure the safe execution of high- and low-voltage activities, including drafting a switching plan.

Do you need prior training?

WEB4 through formal education or relevant (work) experience is sufficient. Basic knowledge of electrical engineering is recommended.

Course duration

- Basic + certification:
8 training days + 1 exam day
- Recertification:
5 training days + 1 exam day

Exam options

- Stipel Exam
- Normec Inrush Exam
- Certificate of participation

What are you qualified to do after completing this course?

You may be appointed or designated as an Installation Responsible Person and/or Work Responsible Person, authorised to manage, supervise and take responsibility for the safe operation of high- and low-voltage activities on the described installations.

Normec Inrush makes learning engaging

Looking for a certified training provider that puts safety and craftsmanship first? We offer high-quality safety courses that meet the strictest standards, including (Stipel) safety examinations. Our training programmes equip your employees with the knowledge, skills and confidence to work safely and responsibly with electricity.

We combine traditional in-house teaching with interactive online modules and realistic practical assignments, ensuring a direct link between learning and the everyday work environment. This makes risks and appropriate safety measures clear and applicable.
